# Timeless Trends to Transform Any Space

Looking to refresh your space? These design tips have the power to totally transform any room, and they're easy to implement!

Introduce Greenery

Plants bring new life to empty corners and shelves, while naturally improving air quality. Succulents, snake plants and Heartleaf Philodendrons can thrive indoors with little maintenance.

DESIGN TIP

No green thumb? No problem. Fake fiddle-leaf fig trees are a popular solution for filling larger spaces, while smaller potted plants fit nicely on desks, end tables and wall shelves.

Incorporate Accent Pieces

Place accent pieces like candles, vases or bowls on coffee tables, nightstands and dresser tops to add a fresh new element to your space.

DESIGN TIP

Give your accents depth by using different sizes and shapes in your display. For example, try pairing a tall plant next to a small bowl or vase.

Evaluate Artwork

The right wall décor can tie together separate elements of a room's design, and in some cases, give the illusion of more space.

DESIGN TIP

Can't pick just one favorite piece? Combine framed artwork, prints and personal photos and create a gallery wall. Try out different frames to mix it up!

Hang a Mirror

If you want to upgrade your space without a full renovation, try hanging a mirror — it will help any room feel more open and spacious.

DESIGN TIP

Brighten up your space by positioning your mirror across from or close to a window to bounce natural light.

Enhance Lighting

Typically, warm light is best for winding down in the evenings, while cool, bright light keeps you energized during the day. Identify your lighting preferences and get the bulbs to match.

DESIGN TIP

Place multiple light sources evenly around the room to help it feel more inviting, especially if natural light is scarce.

Quick Tips for Rearranging Furniture

If you've been thinking about a new layout for your bedroom, living room or office, follow these steps to easily rearrange any space.

Go in With a Vision ✓

Decide what you want to accomplish with the layout (space for a desk, kid's play area, etc.). Find inspiration on Pinterest, Houzz or other home design sites.

Measure Your Space ✓

Accurate measurements of the room and furniture will streamline the process, so you don't have to guess and check.

Draw it Out ✓

Create a scale drawing so you know where everything needs to go. Let one inch equal one foot. Consider typical traffic patterns and leave enough space to access closets, outlets and doors.

Use an App ✓

Design apps can create a digital mockup of your new arrangement. Here are a few to try:

➡ **MagicPlan**
(iOS, Android)

➡ **Décor Matters**
(iOS Only)

➡ **Room Plan Pro**
(iOS Only)
